“One day we had a fly in the opertory that kept annoying us by buzzing around our heads. They don’t teach this in dental school but the suction tip can be used to vacuum up flies at will! I think the state dental board would insist that you change the tip after fly catching is complete! -- Dr Doty.”

web: www.smithcoffey.com.au
Dear Colleague,

On behalf of The University of Western Australia Continuing Dental Education Committee (UCDEC) it gives me great pleasure to present the 2010 program of continuing education courses. Following the new format we hope that you enjoy the Red Book.

Once again we are presenting a number of fantastic presenters from Perth and the east coast.

The UCDEC courses are specifically designed to continually develop both the technical and professional skills of the Dental Practitioner. Attendance at our courses will not only guarantee that your skills and knowledge are kept up-to-date, but will ensure that you maintain that competitive edge by which to best meet your client’s needs. Please look upon continuing education not as chore but as something that will make you a happier and better dental practitioner. Before we know it Continuing Professional Development will be mandatory and will be a requirement for registration.

Once again we have a number of hands-on courses. They are popular so enrol early. With some courses it is possible to hold additional courses if there are enough numbers so please enquire if there is a waiting list.

In order to streamline the preparation for each course you will notice that we have altered our fee structure. This allows us to make preparation ahead of time with limited requirement for last minute changes.

UCDEC aims to have each course fully subscribed. There are costs involved in running every course including an administration fee for each enrolment. The anticipated number of attendees influences the course fee. Therefore the limited attendance courses have a fee that reflects this.

Each year as well as the advertised courses in this book we present additional courses, which are convened after the publication of the book. Please keep an eye out for fliers advertising these courses.

With our ongoing commitment to the Continuing Education of the dental professionals, we offer places to UWA final year students in most of our non-limited attendance course that are relevant to their studies at no cost to them.

All committee members work on a voluntary basis and wish that you enjoy the courses that they have organised for you and hope that not only will you update your skills but you will benefit from networking with other professional colleagues as well.

Dr Jenny Ball
Chairperson, UCDEC
Oral pathology
- a perspective from South Africa

**Professor Vincent Phillips**  BDS, M.Ch.D, PhD, FCPath(SA)Oral Path. Dip.Max-Facial Radiology

The general dental practitioner is often caught up in the routine of restorative dentistry and although aware of hard and soft tissue lesions, these are not afforded sufficient attention due to the pressure of daily dental practice. White and red lesions of the oral mucosa are often overlooked or inadequately diagnosed and result in patient morbidity that could be avoidable. Patients are drinking and smoking a lot more due to socio-economic changes and we as dentists need to be aware of precancerous lesions. Come and participate in a presentation of premalignant lesions of the oral cavity that will enhance your diagnostic acumen and result in improved patient care. Spot a premalignant lesion and save a life.

The radiolucent and radiopaque lesions are often difficult to interpret and even the specialist can make errors of judgment when assessing the differential diagnosis of these lesions. Presentations of common odontogenic cysts and tumours will revitalize your knowledge of these lesions and your ability to make relevant differential diagnoses. Not every radiolucency is a cyst.

This course will cover the following areas:
- Cysts of the jaws and soft tissue.
- Odontogenic tumours; the South African experience.
- Premalignant lesions of the oral cavity.

“Not every radiolucency is a cyst.”

---

**Convenor:** Dr Jenny Ball  
**Date:** Wednesday, 17th March 2010  
**Time:** Registration at 6pm, Course 6.30pm-9pm (approx.)  
**Venue:** ADA House, Havelock Street West Perth  
**Fee:** $90.00 (includes refreshments)  
**Limit:** 70
Forensic dentistry South Africa style

Professor Vincent Phillips BDS, M.Ch.D, PhD, FCPath(SA) Oral Path. Dip.Max-Facial Radiology

Forensic odontology is where the field of dentistry and the law meet. It deals with the examination, handling and presentation of dental evidence in a court of law.

Topic to be covered include:
The work of a forensic odontologist will be covered and how these are implemented in South Africa:

- The dental identification of human remains following trauma, incineration or large scale disasters.
- Bite mark analysis.
- Child abuse.
- Age estimation of young children, juveniles and adults.
- Facial reconstruction for identification purposes.

In this one-day course Professor Phillips will explain the ramifications of forensic odontology in South Africa.

“...where the field of dentistry and the law meet...”

Dr Phillips graduated with a Masters in Oral Pathology in 1981. He is currently Chairman and Head of Department Maxillofacial and Oral Pathology and Forensic Dentistry, Faculty of Dentistry, University of the Western Cape and also works in a private pathology practice. He has written 47 publications as well as contributing chapters to a number of books. Vince has presented numerous paper and lectures around the world. He is also an external examiner in oral pathology at other South African Dental Faculties.

Convenor: Dr Jenny Ball
Date: Friday, 19th March 2010
Times: Registration 8.45am, Course 9am-5pm
Venue: ADA House
Fee: $450.00 (includes lunch, morning & afternoon tea)
Limit: 80
Dr Simon Dimmitt MB, BS(UWA), BMedSc(Hons), FRACP

Clinical medical updates for dentists

A great majority of our dental patients have clinical medical conditions that require consideration as to how we treat our patients and even impact on the type of treatment that is carried out on the patient. Over the last few years accepted philosophies have back-flipped and new medical conditions have arrived to perplex us. In this course Dr Dimmitt will guide us through the relevance of various medical conditions that can influence and affect our dental procedures.

Areas to be covered include:
- Antibiotic prophylaxis.
- The obesity epidemic and its consequences.
- Why blood high blood pressure can be a problem.
- ‘Tell me about Warfarin again’.
- Bisphosphonates.
- Diabetes.
- Organ transplant and immunosuppressed patients.
- Collaboration with medical GPs and specialists.

Dr Dimmitt is a consultant physician in private practice within the areas of general medicine, preventive cardiology and mood disorders. He is also clinical professor in the Department of Internal medicine and School of Medicine and Pharmacology at Royal Perth Hospital. He has been teaching medicine to dental students for 20 years and is the famous author of the much loved book Medicine for Dentists. He is involved in research and has co-authored over 50 published papers along with another book Rational Clinical Examination.

“...new medical conditions have arrived to perplex us.”

Earlybird Fee $425
For bookings before 19th March

Convenor: Dr Jenny Ball
Date: Friday, 16th April 2010
Times: Registration 8.15am, Course 8.30am-4.30pm
Venue: City West, Plaistowe Mews, West Perth
Fee: $485.00 (includes lunch, morning and afternoon tea)
Limit: 100
A day with Professor Wyatt R. (Rory) Hume

Professor Wyatt R. (Rory) Hume DDS, Ph.D

What is our understanding of caries and pulpal disease? Of the treatment and prevention of those two diseases?

The day will include a review of modes of tooth restoration; a review of restorative materials, and of medicaments, drugs, chemicals used in tooth restoration and pulp therapy; and the way that Rory Hume looks at endodontic therapy.

He will cover both from the clinical point of view, as someone whose experience is grounded in looking after people with caries and periodontal disease, and from the perspective of his own research background, which involves the chemical and pharmaceutical aspects of caries treatment, pulp therapy and tooth restoration.

This is a limited attendance course, so book early.

“...looking after people with caries and periodontal disease...”

Dr Hume qualified in dentistry in Adelaide. After completing a PhD he undertook studies at UCLA into the release of biologically active components of materials used in the treatment of dental disease and their biological effects on adjacent tissues. This has changed the way dentists treated caries and dental pulp disease.

Dr Hume has held high academic positions at the universities of Adelaide, Sydney and California, and is currently Provost of UAE University. He continues his ongoing editorial stewardship (with Graham Mount) of the textbook, Preservation and Restoration of Tooth Structure.

Earlybird Fee $425

For bookings before 9th April
Practical oral surgery

Dr David Booth BDSc(UWA), MDSc, FRACD, FiCD, FFOPRCPA, M.Ed. &
Dr Carolyn Stulner, BDSc(UWA), MBBS(Hons), FRACDS(OMS)

Do your basic oral surgery skills need updating? Have you become tentative making that initial incision?

This is a hands-on course that will include the following procedures:

- Flap design.
- Surgical removal of a tooth.
- Bone removal.
- Suturing.
- Biopsy.

This course will be conducted using pig’s heads and is a limited attendance course, so book early.

Please note that due to the possibility of cross-contamination of instruments from Creutzfeldt-Jakob Disease (CJD) and its association with pigs, the majority of instruments used in this course will need to be destroyed.

(Note that this course runs on three separate occasions.)

“Have you become tentative making that initial incision?”
Immunology and allergies

Dr Tiffany Hughes MBBS, FRACP, FRCPA

Immunology and allergies: Asthma, Hayfever, AIDS, Lupus, Rheumatoid Arthritis, Hashimato’s Disease and Food Allergies.

We see these terms on a daily basis. This brief overview of immunology for dentistry is designed to present clinical immunology in an understandable format, covering common conditions, their presentation and management, along with a few immunology and allergy issues of general interest thrown in. Allergies, autoimmune diseases and immunodeficiency will be covered.

“...brief overview of immunology for dentistry...”

Dr Hughes is a clinical immunologist and immunopathologist, working at Fremantle and Princess Margaret Hospital. Her practice incorporates both paediatrics and adults, and she sees a broad spectrum of disease, as well as being involved in diagnostics. As well as coordinating immunology advanced training nationally, Dr Hughes is a Senior Clinical Lecturer for the UWA, and is regularly involved in updates for GPs, other health professionals and community groups.

Convenor: Dr Frank Welten
Date: Friday 28th May 2010
Times: Registration 12.30pm, Course 1pm - 4.45pm
Venue: ADA House, Havelock Street, West Perth
Fee: $215.00 (includes a light lunch and afternoon tea)
Limit: 80

Earlybird Fee $185
For bookings before 30th April
Rubber dam in general practice

Dr Frank Welten, Dr Lena Lejmanoski and Professor Paul Abbott

Studies have shown that the vast majority of patients prefer to have dental treatment performed under rubber dam isolation and the use of rubber dam is considered to be mandatory for some dental procedures and highly desirable for others. However, many dentists are reluctant to use rubber dam at times even though it is a tool that will greatly improve the efficiency, quality and enjoyment of dentistry. Their reluctance may be a result of the lack of regular practice, and hence a loss of confidence, in the technique or it may be due to not being aware of some very simple techniques that can be used. Once you know and master the simple techniques for applying rubber dam, you will never look back! Rubber dam is a tool for excellence in dentistry!

This course will outline simple techniques for the use of rubber dam. It includes demonstrations of the techniques and a hands-on clinical component where dentists can practice the techniques. Participants will be shown how to apply rubber dam quickly and efficiently in a variety of situations. The course can be either a refresher course or an introduction to the different applications of rubber dam.

The course objectives are:

- To refresh dentists knowledge on the use of rubber dam and the techniques available.
- To provide demonstrations on simple rubber dam application techniques.
- To allow participants to practise using rubber dam with the assistance of several practitioners who regularly use rubber dam for their dental treatment.

“Rubber dam is a tool for excellence in dentistry!”
The outcome of endodontic treatment is generally quite predictable if recommended treatment procedures and protocols are followed. However, clinical endodontic procedures can be technically difficult. Typical complications (especially in posterior teeth with extensive restorations) are often related to pulp canal obliteration, access, visibility and canal anatomy, rather than to any other factors. This course will comprise lectures and demonstrations that will reveal an experienced endodontist’s ‘trade secrets’ that simplify the whole treatment process.

Participants will then be able to practice these techniques by doing the ‘hands on’ practical exercises on extracted teeth.

The main objective of this course is to prepare general dental practitioners for an immediate improvement in their ability to perform predictable endodontic treatment.

“...an immediate improvement in their ability to perform...”

Convenor: Dr Frank Welten
Date: Friday, 2 July 2010
Times: Registration 8.45am, Course 9am-5pm
Venue: Oral Health Centre of WA, Monash Avenue, Nedlands
Fee: $490.00 (includes lunch, morning and afternoon tea)
Limit: 16
Management of temporomandibular disorders

Dr Tom Wilkinson BDS (Adel), MSc (Lond) MDS (Adel) Grad Dip Pain Management (Syd)

This course aims to simplify the diagnosis of these often confusing disorders by using four diagnostic categories that cover the majority of these problems.

Topics to be discussed will be:

- A review of the anatomy of the masticatory structures.
- The Biomechanics of masticatory function.
- The development of TMD.
- The use of the TMD Diagnostic flow chart.
- The management of TMD.

Dr Wilkinson will demonstrate to the participants the process of examination and diagnosis on several patients, as well as a demonstration of the construction of a splint chairside.

The course aims to give participants confidence in recognising and treating patients suffering from these disorders.

“...often confusing disorders...”

Earlybird Fee $425
For bookings before 11th June

Convenor: Dr Lena Lejmanoski
Date: Friday, 9 July 2010
Times: Registration 8.45am, Course 9am - 5pm
Venue: OHCWA, Monash Ave Nedlands
Fee: $485.00 (includes lunch, morning and afternoon tea)
Limit: 100
Let’s talk Pros

Dr John Pearson  MDSc (Melb), BDSc (Qld), LDS (Vic), FRACDS, MRACDS (Pros)

When we were at Dental School removable prosthodontic was affectionately or otherwise called Pros. Hated by many, loved by a few, we still all managed somehow.

It is intended to create an overview of removable prosthodontics as practiced in the 2010 covering some newer materials and to review technique that may be useful in this or other disciplines. It is important to realise that the principles used in removable prosthodontics translate to implant retained prostheses and their understanding greatly enhances the success of this newer discipline.

This seminar will endeavour to cover the following topics, not necessarily in this order as topics can overlap.

- Complete dentures: anatomy, bone resorption, muscle activity, neat impressions, record taking and why use a face bow, occlusal planes, neutral zones and the forgotten curves.
- Choosing teeth: where to put the front teeth, cosmetic implications of facial asymmetry, setting teeth and occlusal schemes, complete maxillary dentures, difficult Class 2 dentures and some laboratory aspects.
- Partial dentures: the necessity for mouth and teeth preparation, impression techniques, records and setting occlusion, some design concepts, the free end saddle partial denture, rotational path partial dentures, precision fitted partial dentures using attachments, the “E” clasp and its usage and flexible bases.
- Implant retained complete and partial dentures: implant positioning, number of implants, bar or other retainers, implants assisting partial denture retention, implants to avoid free end saddle dentures and use of implants to assist in maxillary denture retention.
- Other topics: relines and rebases, immediate dentures, use of tissue conditioners and soft liners.

“Hated by many, loved by a few...”
Good looking teeth - where science meets art
(Part 1 - Lecture)

Dr David M Roessler  BDSc, FRACDS, FADI, FPFA, FICD

Now, more than ever before, we have the technical and biologic expertise to make beautiful teeth. Both ceramic and composite resin can be used to restore a single anterior tooth, or improve the entire anterior segment, even an entire occlusion. But sometimes it seems that the technical skill, artistry required and time consumed is increasing instead of decreasing. This lecture will help you achieve better, more consistent results, more simply. What will look best? What will last? When should we be conservative? What should we look for in a smile? How can we make sure our patients will be satisfied?

This lecture will help you to know how to:

• Develop a simple systematic approach to smile diagnosis.
• Improve your aesthetic treatment planning, begin at the end.
• Communicate successfully - does your patient want treatment?
• Decide when to use composite resin and when to use ceramics.
• Learn when layering is appropriate and how it helps.
• Understand how to achieve the best bonding.
• Establish a protective occlusion.

...we have the technical and biologic expertise to make beautiful teeth.”

Convenor:  Dr Graham Carmichael
Dates:  Friday 17 September 2009
Times:  Registration: 8:30am, Course: 9am-5pm
Venue:  City West Function Centre, Plaistowe Mews, West Perth
Fee:  $440.00 (includes lunch, morning and afternoon teas)
Limit:  100

Earlybird Fee $380
For bookings before 20th August
Good looking teeth - getting practical (Part 2 - Practical)

Dr David M Roessler  BDSc, FRACDS, FADI, FPFA, FICD

The one-day lecture course is required for entry to a limited attendance one-day hands-on workshop designed to develop your expertise in veneer preparation and composite resin layering. This expert module is designed to convert theory into practice. Enhance your results with in-depth practical skill sessions which will increase your confidence and competence:

• Improve your tooth anatomy.
• Optimise your preparations.
• Simplify your armamentarium.
• Manage the soft tissues.
• Choose the right shade.
• Learn to layer.
• Get reliable, repeatable results.

David is a Prosthodontist in Sydney’s CBD where he has recently been appointed as Supervising Specialist Clinical Consultant of The Dental Specialists, a multidisciplinary specialist centre.

David has authored numerous publications and is an invited lecturer and examiner to both undergraduate and graduate students at a number of Universities as well as being an Examiner for the Royal Australasian College of Dental Surgeons over a number of years.

“Get reliable, repeatable results.”

Proudly sponsored by 3M ESPE

Convenor: Dr Graham Carmichael
Date: Saturday, 18 September 2010
Times: Registration 8.30am - 9am, Course 9am - 5pm
Venue: OHCWA Optec Laboratory & Lecture Theatre
Fee: $410.00 (includes morning tea)
Limit: 25
Dr Andrew Brostek is in a fulltime private dental practice in Perth, Western Australia, is a visiting lecturer in Operative Dentistry at the OHCWA Dental School and is Director of the Dental Laser & Minimally Invasive Dentistry Training Centre (Perth).

Dr Andrew Bochenek has received a BDSc from the University of Melbourne and LDS from Victoria. He is a Fellow of the Pierre Fauchard Academy (1999) and Fellow of the Royal Australasian College of Dental Surgeons (1998). Andrew is in a private practice in Perth and is a visiting lecturer and clinical tutor at the School of Dentistry, UWA.

Grow your own practice through the implementation of minimally invasive dentistry

Dr Andrew Brostek BDSc, BSc, FICD
Dr Andrew Bochenek BDSc, LDS, FPFA, FRACDS

This course will include presentations on current concepts in caries control, combined with hands-on demonstration and use of saliva and plaque testing. Emphasis will be on incorporating these measures into day-to-day general clinical practice.

At the completion of this seminar, attendees would have an appreciation of the current concepts of dental caries and caries risk assessment. They will also be aware of minimally invasive caries preventative, remineralizing and treatment protocols.

Attendees will understand how to measure and quantify caries contributing factors, such as bacterial counts, saliva characteristics dietary habits and fluoride history. They will be able to carry out patient interviews to establish information on caries disease modifying factors (medical conditions, lifestyle, socio-economic background and oral hygiene habits).

After analysing this information, attendees will be able to selectively apply appropriate therapies to caries risk patients to render oral health care more efficiently in their own practices.

“Bruxism is often considered to be a major risk factor...”

Earlybird Fee $195
For bookings before 3rd September

Convenor:  Dr Lena Lejmanoski
Date:       Friday, 1st October 2010
Times:      Registration 8.45am, Course 9am-1pm
Fee:        $225.00 (includes morning tea)
Limit:      24
Oral cancer screening for the oral health professional

Dr Ramesh Balasubramaniam  BSc, BDSc (UWA), MS (UKy), Cert. Orofacial Pain, Cert. Oral Medicine and Dr Agnieszka Frydrych BDSc(Hons), MDSc(Oral Medicine and Oral Pathology), FRACDS(OralMed)

The role of the oral health professional is paramount in the early detection of potentially malignant and malignant oral conditions. However, differentiating between normal and abnormal is often ‘shades of pink’. Hence clinicians are left with the difficult task of determining whether to biopsy, watch and review or dismiss the patient. With recent advances in various diagnostic tools, clinicians are now expected to be able to reassure anxious patients. This lecture will address these new technologies that have hit the market and are being used for screening and diagnosis of oral cancer. This lecture will also provide the latest scientific evidence for the clinician interested in incorporating these diagnostic tools in the general dental practice for screening oral cancer.

By the end of the course, participants will be able to:

• Clinically identify oral lesions that are potentially malignant and malignant.
• Recognise the various diagnostic tools available for oral cancer screening.
• Understand the scientific evidence for the use of various diagnostic tools and make informed decisions on their clinical usefulness.

“The role of the oral health professional is paramount in the early detection...”

Convenor: Dr Jenny Ball
Date: Friday, 29 October 2010
Times: Registration 12.45pm, Course 1-5pm
Venue: ADA House, Havelock Street, West Perth
Fee: $215.00 (includes light lunch on arrival and afternoon tea )
Limit: 80

Earlybird Fee $185
For bookings before 1st October
UCDEC Policies

PRIVACY POLICY
The Committee compiles the UCDEC mailing list and it is not available other than for the purposes of the Committee. Class lists may be provided to the Course Convenor, presenter/s and sponsors as part of the sponsorship agreement.

STUDENT ATTENDANCE
Undergraduate Students: At the discretion of the committee and the course convenor, final year undergraduate dental students may be invited to attend a non-limited attendance UCDEC course free of charge. Catering arrangements will be at the discretion of the convenor. The UCDEC Dental Faculty member will liaise with the UCDEC secretary to finalise attendance arrangements.

Postgraduate Students: Postgraduate dental students may apply to attend a non-limited attendance UCDEC course free of charge. However, attendance must be made through the Course Convenor who will then advise the UCDEC secretary.

MOBILE PHONES AND LAPTOPS
Mobile phones are not to be used during any lectures, including SMS messaging, recording and the photographing of any images.
Other than the Lecturer, laptop computers must not be used during presentations.

REFUNDS
Refunds must be requested in writing, by email, fax or mail to the Administration Manager, UWA Extension, The University of Western Australia, 35 Stirling Highway, Crawley, 6009.
A fee of $76.00, which is the administration fee paid by UCDEC, will be deducted from refunds.
If preferred, a Credit note will be issued for enrolment in any UCDEC course within the next 12 months. A fee of $54.00 will be deducted from Credit notes.
For Lecture courses, refunds will not be made if the cancellation is made less than one week before the course commences.
For Hands-on courses, a full refund, less administration fee, will be given for cancellation of hands-on courses made at least four weeks prior to the event. A fifty percent refund, less administration fee, will be given for cancellations of hands-on courses made at least two weeks prior to the event. No refund will be given for cancellations made less than two weeks.
Substitution of delegates can occur at any time at no additional cost.
